

CABLE PROTECTION FOR COBOTS

The universal attachments LSDFB and MESUB are particularly suitable for robots where there are no screws, flange or stop surfaces in conventional sense. Both article variants are designed for a specific nominal diameter range of round robotic arms.

RANGE LSDFB

- Standard cobots applications
- Diameter robot arm of 54 to 110 mm

RANGE MESUB

- Heavy duty cobots applications
- Diameter robot arm of 54 to 108 mm

LSDFB: Suitable for easy use at cobots with slow to average movement speeds and low loads. Usually, LSDFB items are passed NW17 to NW29. The console of LSDFB is attached to the robotic arm to prevent it sliding and the turntable allows variable cable management.

MESUB: Suitable for heavy use on cobots or industrial and palletizing robots with high dynamic load and high loads. MESUB-articles can accommodate all REIKU gripping clamps variants, from NW 17 to NW 90. The clamp is equipped with a slip-resistant rubber profile made of EPDM. With the hinge pin screw connection very high holding forces can be applied, the universal console allows the attachment of all REIKU gripping clamps.

EVERYTHING YOU NEED TO CUSTOMIZE THE PERFECT UR ROBOT APPLICATION IN ONE PLACE

Visit Universal Robots+ and find suitable accessories
for UR robot arms – tailor-made for your needs

Enter a world of collaborative robotics accessories

Robot arms are dynamic tools. Depending on which accessories you use them with, they turn into a whole another product. From grippers, sensors and cameras up to communication or simulation software and protective covers, the possibilities are endless. Find out what fits your robot best!

- > Configuration in no time
- > Certified by Universal Robots
- > One-stop solution
- > Direct support from developers

Collaborative automation is about much more than choosing the right robot arm. When looking for the optimal automation solution, you face an almost infinite range of possibilities and additional products. To keep your integration process fast and simple, Universal Robots has invented Universal Robots+:

Universal Robots+ is an online showroom for end effectors, software and accessories. Explore tailor-made automation systems. All featured products are Plug & Play solutions for UR robot arms and ready for operation in no time, which saves you valuable time and resources. Every product featured at the UR+ showroom and deployed with an end-user is certified by Universal Robots.
