

The Velcro Strap kit is recommended for Cobots that operate at slow to average speeds with moderate conduit loads when filled with cables/hoses.

The Metal Band is recommended for Cobots that operate at higher than average speeds or are equipped with heavier conduit loads when filled with cables/hoses.

Our Cobot kits install quickly and easily. Each kit comes pre-engineered with the correct diameter and quantity of REIKU metal bands or velcro-style straps combined with the necessary 17, 23, 29 or 36 mm REIKU clamps, jaws and conduit.
